Quick Reference for New Gait Belt

Instructions

1. The label and fold must be facing AWAY from the abdomen (towards you), the teeth will be on the outside rather than the inside

2. Put metal tab through first part of metal buckle (where the teeth are) and pull it tight

3. Then put the metal tab through second part of metal buckle and pull till secure and snug to patient

*Do not leave slack in the belt (this causes the teeth not to grab)
